

Biomass Silo Systems

CASE STUDY:
BECKMAN COULTER,
MID-WEST, IRELAND.

Beckman Coulter are an American medical device manufacturer located in the Mid-West of Ireland.

During the recent expansion of their facility they employed a local company 'Enerpower' to install a 550kw multi-fuel wood boiler capable of running on both wood chip and wood pellet which would provide heating to the new 6,700 square meter building.

Enerpower approached Biomass Silo Systems to design manufacture and install a suitable wood chip silo and loading system for this project.

We installed a 90m³ wood chip silo made from galvanised steel and a loading auger capable of transporting wood chip from a tipper truck into the silo at a speed of 45m³ per hour.

The wood chip used to heat their new buildings is all locally produced which has allowed Beckman Coulter to save over 50% on heating costs in comparison with a fossil fuel boiler while simultaneously benefiting the local economy and reducing their carbon footprint.
